ABOUT BIGFOOT

Established in 2018, Bigfoot is the first frac sand mine opened by Black Mountain Sand in the Eagle Ford Shale.

The facility is named after the community in which it resides in honor of the famous Texas Ranger, William "Bigfoot" Wallace, a former resident of the town.

Because this location is in the heart of the Eagle Ford Shale, we deliver significant cost savings by eliminating the logistical challenges of shipping sand by rail from northern mines, or by truck from central Texas.

BLACK MOUNTAIN SAND

Winter Garden White® 100 MESH

FEATURES

Based in Atascosa County, the Winter Garden White® sand from our Bigfoot Mine meets or exceeds the API standards for fracing. Our proven K factor resistance enables for high pressure pumping without compromising the integrity of the sand. This high-quality proppant meets the rigorous demands of the industry and allows our frac sand customers to focus on their core competency – hydrocarbon production. Using in-basin sand can reduce the total cost of drilling and completing a well and increase the return on investment.

PHYSICAL PROPERTIES	100M WINTER GARDEN WHITE®
Crush Resistance - K Factor	7K
Specific Gravity	2.66
Bulk Density (lb/ft ³)	89
Bulk Density (g/cm ³)	1.4
Krumbein Roundness	0.6
Krumbein Sphericity	0.7
Acid Solubility (wt %)	<3.0
Turbidity (NTU)	<250
