

EAGLE FORD SHALE

Dimmit Facility

1176 Merz Circle
Carrizo Springs, TX 78834

2MM Annual Tons Mine Capacity

9K Tons Vertical Storage

1 Dedicated Truck Loadout

10 Minute Avg. Load Time

200+ Trucks / Day

ABOUT DIMMIT

Dimmit is the second frac sand mine opened by Black Mountain Sand in the Eagle Ford Shale in 2018. The name derives from its location in Dimmit County, Texas. The county is named for Philip Dimmitt, a major figure in the Texas Revolution.

Because this location is in the heart of the Eagle Ford Shale, we deliver significant cost savings by eliminating the logistical challenges of shipping sand by rail from northern mines, or by truck from central Texas.

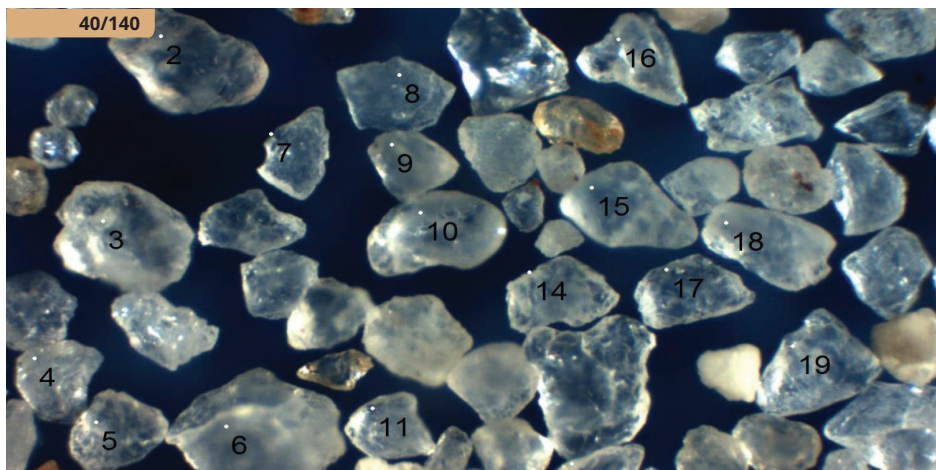

BLACK MOUNTAIN SAND

Winter Garden White® 100 MESH

FEATURES

Based in Dimmit County, the Winter Garden White® sand from our Dimmit Mine meets or exceeds the API standards for fracing. Our proven K factor resistance enables for high pressure pumping without compromising the integrity of the sand. This high-quality proppant meets the rigorous demands of the industry and allows our frac sand customers to focus on their core competency – hydrocarbon production. Using in-basin sand can reduce the total cost of drilling and completing a well and increase the return on investment.

PHYSICAL PROPERTIES	100M WINTER GARDEN WHITE®
Crush Resistance - K Factor	7K
Specific Gravity	2.66
Bulk Density (lb/ft3)	89
Bulk Density (g/cm3)	1.4
Krumbein Roundness	0.6
Krumbein Sphericity	0.7
Acid Solubility (wt %)	<3.0
Turbidity (NTU)	<250
